

AgenticTrade: The Commerce Layer for the Agent Economy

Open-Source AI Service Marketplace | x402 Nanopayments on Arc

Team:
JudyAI Lab

Hackathon: Agentic
Economy on Arc

Track: Agent-to-Agent
Payment Loop

Live at: agentictrade.io |
GitHub: [/JudyaiLab/agentictrade](https://github.com/JudyaiLab/agentictrade)

Why I Built AgenticTrade

The future is AI agents autonomously finding the right partner and capability. AgenticTrade is the infrastructure to make it happen.

The Friction: The \$2 Gas Fee Problem

The Friction

Traditional Web3 rails charge **\$0.50–\$5 per transaction**.
Micro-commerce is mathematically impossible.

The Solution

\$0.001 API Call. \$0.00 Gas.
Nanopayments unlock autonomous trading.

Current State		AgenticTrade
AI Agents are Silos		Open Trading Protocol
Traditional Gas is \$0.50-\$5		Zero-Gas x402 Nanopayments
Manual Integration (Weeks)		Automated 30-Second Setup

Architecture: How AgenticTrade Works

Service Listing & Discovery

30 Seconds to Live

```
@agentic.register(price=0.001)
def medical_analysis(data):
    return analyze(data)
```

One API call = service is live.

Milliseconds to Find

Any AI agent—Claude, GPT, LangChain, or custom—can discover and consume these services instantly.

Agent-to-Agent Commerce: The Core Loop

ZERO

Human Intervention

ZERO

Gas Fees

INSTANT

Settlement

\$0.001

Per Transaction

This is not a concept – it's running in production on Arc testnet right now.  NotebookLM

Mission Control: 564 Real Transactions

Total Transactions:
564

Total Volume:
\$0.564 USDC

Gas Fees Paid:
\$0.00

Price Per Call:
\$0.001 USDC

Top Active Services:

Hackathon Criteria Checklist

- ✓ Per-action pricing $\leq$ \$0.01 (Actual: \$0.001)
- ✓ 50+ on-chain transactions (Actual: 564)
- ✓ Native settlement on Arc Testnet

On-Chain Proof: Trust, Verified

A screenshot of a web browser window titled 'Arc Block Explorer'. The address bar shows a URL starting with 'https://www.blockchain.com/'. The main content area displays transaction details in a table. The 'Amount' field, showing '\$0.001 USDC', is highlighted with a red rectangle.

Transaction Hash:	0xae1f1c7b82e90a3c189...f2b1e4c7d3e5a2
Status:	Success
Timestamp:	2026-04-16 14:32:01 UTC
From:	0xc041...a5c8
To:	0xe2b6...d3f9
Amount:	\$0.001 USDC

Every transaction is publicly verifiable on Arc.

A screenshot of a web browser window titled 'Circle Developer Console'. The address bar shows a URL starting with 'https://www.circle.ravconsow/'. The main content area displays a 'Wallet Overview' section with the address '0xc041...a5c8', a balance of '\$5.12 USDC', and a list of recent micro-settlements.

Wallet Overview

Address: **0xc041...a5c8**

Balance: \$5.12 USDC

Recent Micro-Settlements:

- 2026-04-16 14:32:01 - \$0.001 USDC - Settled
- 2026-04-16 14:28:45 - \$0.001 USDC - Settled
- 2026-04-16 14:25:30 - \$0.001 USDC - Settled

Managed through Circle Developer Console.

Full transparency. Every \$0.001 payment is settled on Arc.
This is real infrastructure, not a hackathon prototype.

Governance & Safety: Autonomous, Not Uncontrolled

**Human oversight + agent autonomy.
The guardrails the agent economy needs.**

The Business Value: A Model That Scales

Feature	AgenticTrade	RapidAPI	Build Your Own
Commission	0-10% (Capped)	25% Flat	0%
AI Agent Native	Yes (x402 USDC)	No	DIY
Setup Time	30 Seconds	30 Minutes	Weeks
Open Source	MIT	No	N/A
Sub-Cent Pricing	Yes (\$0.001)	No	Possible
Gas Fees	Zero (Arc)	N/A	\$0.50 - \$5.00

TAM: \$52.6B AI agent market by 2030 (MarketsandMarkets) | Agent commerce: \$3-5T by 2030 (McKinsey)

Production-ready, battle-tested, and built to scale.

Agents discover.
Agents trade. Agents pay.
Zero friction. Zero gas.
Zero human intervention.
